

# P.A.C.E. Action Plan

This P.A.C.E. Action Plan worksheet gets you to think through a scenario and build a multilayered response to thrive when something happens. You'll want to go into details with your planning. Then test it out to see what you have missed. Once you have identified things you have missed, add those in to your plan.

Here's an example to get you started: Think through how you get water where you live

- Primary – Turn on the tap and water comes out
- Alternate – Can't use tap water, we have some water in a filter container we can use
- Contingency – Filter container is empty, time to use some bottled water
- Emergency – Out of bottled water, the toilet reservoir has some water

CATEGORY / SITUATION:

---

## Primary

---

*This is the main way you deal with the situation when times are "normal".*

## Alternate

---

*This is the second / backup method if the Primary approach is not available.*

# Contingency

---

*Things are getting worse for the situation. What do you do when the Primary and Alternate are not available?*

# Emergency

---

*Brown matter is hitting the fan. What do you do if you've tried your Contingency approach and that doesn't work?*
